PROFESSIONAL SUMMARY

Business and Data Analyst with a First Class Honours M.Sc. in Data Analytics and 3 years of industry experience bridging technical engineering teams and commercial stakeholders across the full software delivery lifecycle. Proven Agile/Scrum practitioner with hands-on experience in requirements elicitation, process mapping, stakeholder management, and BI delivery using Tableau, Power BI, and SQL. Seeking junior, associate, or graduate Business Analyst, Data Analyst, or Technology Consultant roles in Dublin where data-driven thinking and cross-functional collaboration drive measurable business outcomes.

CORE COMPETENCIES

Business Analysis: Requirements Elicitation, BRD/FRD Writing, Functional Specifications, User Stories, Acceptance Criteria, Epics, As-Is/To-Be Process Mapping, Gap Analysis, Root Cause Analysis, UAT Support, Change Management, Stakeholder Workshops, SDLC.

Data & Business Intelligence: Tableau, Power BI, SSRS, SSIS, SQL Server, ETL Pipeline Design, Data Modelling, Star/Snowflake Schema, KPI Dashboards, Data Quality, Predictive Modelling, Explainable AI (SHAP), Apache Spark, Neo4j.

Delivery & Tooling: JIRA, Confluence, Azure DevOps, Azure Pipelines, Agile/Scrum, Sprint Planning, Backlog Management, Story Points, Git, AWS S3, Docker, DataDog, Microsoft 365.

Programming & Analytics: Python, SQL, R, C#, .NET, MS Excel (Advanced: Pivot Tables, VLOOKUP, Data Validation), RapidMiner, Power Query, DAX.

PROFESSIONAL EXPERIENCE

Customer Advisor (Part-Time, alongside M.Sc.)

B&Q | Dublin, Ireland | May 2025 - Present

- **Stakeholder Communication:** Managed 60+ daily customer interactions, eliciting needs and translating them into precise product and technical specifications, directly mirroring the requirements discovery and stakeholder workshop process central to business analysis.
- **Process & Operations:** Collaborated within a cross-functional team to maintain 95%+ stock compliance; applied structured problem-solving to resolve complex customer issues, consistently achieving first-contact resolution and a near-zero error rate on custom technical orders.

Software Engineer

TestingXperts (Client: DraftKings) | Chandigarh, India | Oct 2021 - Jul 2024

- **Agile BA Delivery & JIRA:** Acted as primary liaison between Product Owners and engineering teams across 2 products (DraftKings, Golden Nugget) across the full SDLC; authored user stories, epics, and functional specifications, defined acceptance criteria, assigned story points, and managed JIRA and Confluence backlogs, scaling sprint delivery from ~100-150 to 500+ ODR game integrations per two-week sprint.
- **Requirements Elicitation & Process Mapping:** Elicited, documented, and validated business requirements from commercial stakeholders; mapped As-Is workflows and proposed To-Be processes to identify gaps and drive continuous process improvement across gaming platform delivery.
- **Third-Party Vendor & Change Management:** Acted as the sole point of contact managing 20+ external game vendors simultaneously across major providers; independently managed integration timelines, resolved technical blockers, and coordinated change management activities across 7 jurisdictions (6 US states and Ontario, Canada) without escalation to the DraftKings internal team.
- **Quality Assurance & Bug Resolution:** Proactively identified and resolved defects missed by the QA team, driving an estimated 30% improvement in pre-production bug detection and significantly reducing production incidents across the gaming platform.
- **Data Pipeline & Automation:** Designed and built Python preprocessing scripts for ODR game data ingestion, replacing a fully manual process and automating ETL transformation workflows to eliminate handoffs between development and QA cycles.

- **Backend Services, SQL & UAT:** Owned full-lifecycle maintenance of DraftKings' payments, bonuses, offers, and discounts backend; resolved SQL optimisation tickets and wrote complex queries across 100+ relational tables; led UAT cycles to validate financial and promotional data accuracy across Web, iOS, and Android.
- **CI/CD & Release Management:** Managed the build lifecycle via Azure Pipelines; configured automated builds and TestFlight deployments, reducing rollback risk and supporting rapid, stable production releases.

EDUCATION

M.Sc. Data Analytics, First Class Honours

Dublin Business School, Ireland | Jan 2025 - Jan 2026

B.Tech Computer Science

Amity University, India | 2017 - 2021

KEY PROJECTS

Cross-Industry Churn Prediction & Explainable AI | M.Sc. Dissertation

- Evaluated and compared multiple ML frameworks to identify at-risk customers across B2B Telecom and B2C Insurance sectors, using Python for end-to-end model development, training, and evaluation.
- Applied Explainable AI (SHAP) to surface causal drivers of churn, translated technical model outputs into stakeholder-ready business findings, and presented ROI analysis of targeted retention interventions versus broad acquisition spend.

Business Intelligence & ETL Solution for NYC Taxi Operations

- Architected an end-to-end BI pipeline processing 2.8 million+ real-world trip records; designed a Star Schema data warehouse (1 fact table, 4 dimension tables covering 266 service zones) with a fully automated SSIS ETL pipeline incorporating null handling, data type conversion, batch processing, and data validation, achieving 95% successful data load.
- Produced 5 SSRS reports (drill-down, matrix, parameterised, executive dashboard with subreport, and revenue analysis) and 4 cross-filtered Tableau visualisations, each mapped to defined requirements for 9 stakeholder groups across operational, strategic, and executive levels.
- Extended the solution with a Neo4j graph database implementation, conducting a structured performance benchmark against SQL Server across 7 query types to produce a technology selection recommendation report.

FIFA Player Recruitment Dashboard | Tableau vs Power BI Comparative Study

- Built identical 5-visualisation recruitment dashboards simultaneously in both Tableau and Power BI, including scatter plots, treemaps, donut charts, radar charts, and bar charts, with full cross-visual filtering and dynamic parameter controls to support scouting and contract decisions.
- Produced a structured critical evaluation report comparing both BI platforms across customisation depth, data modelling, interactivity, and UX, delivering an evidence-based platform recommendation for organisational BI tooling selection.
