Dublin, Ireland | anish.rao888@gmail.com | (+353) 892681136 | [LinkedIn](#) | [Portfolio Website](#)

PROFESSIONAL SUMMARY

Data and Business Analyst with a First Class Honours M.Sc. in Data Analytics and nearly 3 years of commercial experience operating across both technical delivery and business stakeholder management. At DraftKings, served as the sole engineer responsible for the Casino ODR integration pipeline — independently owning vendor relationships with 20+ third-party game providers, driving sprint throughput from 150 to 500+ game integrations, and contributing directly to the live launch of Golden Nugget Online Gaming in West Virginia and Michigan. Later moved to the core backend team covering payments, bonuses, and compliance across 7 regulated jurisdictions. Skilled in requirements elicitation, SQL, Python, Agile delivery, and BI tooling (Power BI, Tableau). Dublin-based, on a post-study work permit with no sponsorship required, and available immediately.

KEY SKILLS

Business Analysis: Requirements Elicitation, User Stories, Acceptance Criteria, Contributed to BRD/FRD Documentation, As-Is/To-Be Process Mapping, Gap Analysis, Root Cause Analysis, UAT, Stakeholder Management, Change Management, Agile/Scrum, Kanban, MoSCoW Prioritisation, Sprint Planning, Backlog Grooming, SDLC

Data & BI: SQL (Advanced), Power BI, DAX, Power Query, Tableau, SSRS, SSIS, ETL Pipeline Design, Data Warehousing, Star Schema, Data Modelling, KPI Dashboards, Predictive Modelling, Explainable AI (SHAP), RapidMiner, Apache Spark

Technical: Python, C#, .NET, Django, R, MS Excel (Pivot Tables, VLOOKUP, Power Query), Git (branching, rebasing, conflict resolution), AWS S3, Docker

Delivery & Tooling: JIRA, Confluence, Azure DevOps, Azure Pipelines, Bamboo, DataDog, Figma, Lucidchart, Microsoft 365, CI/CD, Release Management, TestFlight

AI & Emerging Tools: GitHub Copilot, Claude (Anthropic), Cursor — daily integration of AI-assisted development and analytics workflows across documentation, code review, and data analysis

PROFESSIONAL EXPERIENCE

Software Engineer — Business & Vendor Liaison

TestingXperts (Client: DraftKings) | Chandigarh, India | Oct 2021 – Jul 2024

- Became the sole engineer responsible for the Casino ODR integration pipeline after the previous engineer's departure, independently managing end-to-end delivery for 500+ game integrations per 2-week sprint across 20+ external game vendors — scaling throughput from approximately 150 integrations per sprint without delays or escalations to the client team.
- Designed and implemented an asset caching solution for iOS Casino games — caching the top 10 most-played game assets locally with dynamic storage checks to prevent device overflow — eliminating repeated download errors identified via DataDog and directly contributing to the successful live launch of Golden Nugget Online Gaming in West Virginia and Michigan.
- Acted as the primary point of contact for all third-party game vendor communications; owned troubleshooting threads, drove issue resolution from start to finish, and coordinated across Casino Ops, CasinoHub, and the DraftKings operations team with minimal involvement from client-side management — recognised in writing by the Sr. Software Engineering Manager at DraftKings for ownership and professionalism.
- Elicited and documented business and technical requirements in Confluence; contributed to BRD and FRD documentation, mapped As-Is workflows, and designed To-Be processes that removed handoff bottlenecks between development and QA cycles.
- Managed JIRA backlogs across two products (DraftKings Casino and Golden Nugget); groomed tickets, authored user stories with acceptance criteria, assigned story points, and collaborated with Product Owners to maintain sprint delivery across both platforms.
- Designed Python ETL scripts to fully automate a manual ODR data-ingestion process, removing an entire handoff step and significantly reducing preprocessing time; deployed game assets to AWS S3 via Bamboo CI/CD pipelines.
- Moved to the core backend team in the final year, working on .NET/C# services covering payments, bonuses, offers, and regulatory compliance across 7 regulated jurisdictions (6 US states and Ontario); maintained and extended backend logic across Web, iOS, and Android, including on-call rotation duties every 4th sprint.
- Wrote complex SQL queries across 100+ relational tables for data validation, debugging, and reporting across payments, transactions, and gameplay data; led UAT cycles verifying financial data accuracy before each release.
- Refactored a company-wide TestingXperts internal tool built on Django (Celery, Redis, Docker), enforcing coding standards and delivering new features adopted by 1,000+ staff across the organisation.
- Managed CI/CD pipelines via Azure Pipelines and Git, including daily rebasing across a high-volume shared codebase; configured automated TestFlight builds for iOS releases, reducing rollback risk and accelerating release cycles.

EDUCATION

M.Sc. Data Analytics, First Class Honours - Dublin Business School, Ireland | Jan 2025 - Jan 2026

B.Tech Computer Science - Amity University, India | 2017 - 2021

KEY PROJECTS

A selection of personal and academic projects are available at: <https://anishr24.github.io/anish-portfolio>

Business Intelligence & ETL Solution for NYC Taxi Operations

- Architected a Star Schema data warehouse and built an automated SSIS ETL pipeline processing 2.8M+ trip records with data validation, null handling, and batch processing — achieving a 95% successful load rate across the full dataset.
- Delivered 9 executive-level Tableau dashboards and parameterised SSRS reports mapped to KPI requirements across C-suite, operational, and strategic stakeholder groups.
- Benchmarked Neo4j graph database against SQL Server across 7 query types with measured performance comparisons; produced a structured technology-selection recommendation report with evidence-based conclusions.

Cross-Industry Churn Prediction & Explainable AI | M.Sc. Dissertation

- Built end-to-end machine learning pipelines in Python to identify at-risk customers across B2B Telecom and B2C Insurance sectors; applied Explainable AI (SHAP values) to surface causal churn drivers and translated model outputs into ROI-focused business recommendations.
- Deliberately prioritised interpretability over raw model accuracy — using SHAP to make predictions explainable to non-technical stakeholders, bridging the gap between data science output and actionable business decision-making.
- Integrated AI-assisted development tools (GitHub Copilot, Claude, Cursor) throughout the research pipeline for debugging, test-case generation, and documentation — accelerating iteration and demonstrating practical AI integration in an analytics workflow.

FIFA Player Recruitment Dashboard | Tableau vs Power BI Comparative Study

- Built identical 5-visualisation recruitment dashboards simultaneously in Tableau and Power BI — including scatter plots, treemaps, donut charts, radar charts, and bar charts — with full cross-visual filtering and dynamic parameter controls to support scouting and contract decisions.
- Produced a structured evaluation report comparing both platforms across customisation depth, data modelling, interactivity, and UX — delivering an evidence-based platform recommendation for organisational BI tooling selection.

CERTIFICATIONS

Microsoft Power BI Data Analyst Associate • Databricks Data Engineer Associate • IBM Business Analyst Professional (Coursera) • Google Data Analytics Professional (Coursera) • Tableau Advanced (Udemy) • Statistics for Data Science & Business Analytics (Udemy) • Python Certification (NPTEL) • McKinsey Forward Leadership & Problem Solving

ADDITIONAL EXPERIENCE

Customer Advisor (Part-Time, alongside M.Sc.)

B&Q | Dublin, Ireland | May 2025 - Present

- Balanced part-time work alongside a full-time M.Sc. programme, managing customer-facing responsibilities while meeting academic deadlines — demonstrating reliability and time management under sustained pressure.
- Onboarded rapidly across multiple specialist departments, picking up technical product knowledge from scratch each time and consistently becoming a dependable point of contact within days of moving to a new area.
- Regularly stepped into informal supervisory responsibilities, supporting colleagues and acting as a go-to resource for complex or escalated queries across departments.
- Assisted non-English-speaking customers by communicating across multiple languages, ensuring accurate advice regardless of language barriers and reflecting an instinct for clear communication in diverse environments.
